EVAULT

Overview

EVault Backup and Recovery **Solutions Trusted by Health Care Entities**

The security and privacy of electronic health records are a top concern and focus area for IT staff within health care organizations. Providers and payers are tasked with ensuring the confidentiality and integrity of their protected health information (PHI). The EVault Health Care Solutions Group provides backup and recovery software and managed service solutions designed to help these regulated organizations protect their critical data.

EVault InfoStage™ is a cost-effective and industry-proven backup and recovery software enabling health care payers and providers to immediately store data off-site for enhanced disaster recovery and address regulatory concerns. Leveraging EVault's own innovative, disk-to-disk technology, **EVault InfoStage** eliminates the labor-intensive manual tasks and reduces errors associated with tape backup while providing automated backup, recovery and reporting functionality.

This software also powers the popular **EVault Protect**SM managed backup and recovery service, designed especially to help small- to mid-sized health care entities with multiple offices or limited IT resources who require off-site data storage.

"On a scale from 1-10, by using EVault I've been able to reduce my IT-related stress level from a 9 to a 3."

Tom Ririe
Network Administrator
San Miguel Villa
Convalescent Hospital

Benefit Summary

Take Control of your Backup and Recovery

- Reliably move PHI off-site with advanced encryption
- Significantly reduce human error by automating your data backup process
- Centrally monitor & manage backups for multiple facilities across town or across country

Enhance your Data Security

- Address HIPAA Privacy and Security standards
- Automated backup process reduces human intervention and potential error
- Data remains encrypted and protected throughout the backup and recovery process

Save Time & Money

- Lost or corrupted files are restored online in seconds, 24 hours a day
- Automated process requires no manual prompting
- Eliminate inventory management and shipping of backup tapes offsite for storage
- Reduces bandwidth requirements, backup windows and storage footprint
- Eliminate tape retrieval from storage to conduct simple file restores
