

Overview

EVault Backup and Recovery Solutions Trusted by Law Firms

In today's digital world, excellent client representation extends beyond litigation. IT staffs must support their firms with secure data backup and recovery systems that ensure easy and fast retrieval of critical records—all while managing equipment and manpower costs.

EVault InfoStage™ is a cost-effective and industry-proven backup and recovery software that helps legal IT staff take back control of their business continuity and disaster recovery processes throughout their organization. Leveraging its own innovative, disk-to-disk technology, EVault InfoStage eliminates the labor-intensive manual tasks associated with tape backup by providing automated backup, recovery and reporting functionality.

The software also powers the popular EVault ProtectSM managed backup and recovery service, designed especially for small- to mid-sized law firms with multiple offices but limited IT resources.

“We really have seen a savings of time in restores. With tape, it could take 45 minutes up to half a day to find something. Now we’re seeing the average restore taking from five to 15 minutes.”

Sean Scott
CIO | Womble Carlyle

Benefit Summary

Take Control of your Backup and Recovery

- Reliably move data off-site with advanced encryption
- Automated reporting quickly verifies backup and recovery status
- Centrally monitor/manage backups across multiple offices across town or across the country

Increase Data Security

- Automated backup process reduces human intervention and potential error
- Data remains encrypted and protected throughout the backup and recovery process

Save Time & Money

- Automated process requires no manual prompting
- No inventory management and shipping of backup tapes offsite for storage
- Innovative software architecture reduces bandwidth requirements, backup windows and storage footprint
- No need to retrieve tapes from storage to conduct a simple file restore
- Lost or corrupted files are restored in seconds, 24 hours a day
- Reduce or eliminate upfront and ongoing hardware and software costs
